Teas' Weeping Russian Mulberry.

This tree was budded at about 6 feet. It grew one season, forming a good head in 1886. The wood was all cut away, that fall, for grafting, leaving only spurs, 3 to 6 inches long. These grew out in 1887, making all the branches shown in the cut. It was not touched all summer, except to remove an occasional sprout that came out along the stem below where budded. The head is shown as it grew, without any training, up to late in August, when the tres was dug, photographed, and sent to the St. Louis Exposition, where it was seen and admired by tens of thousands of visitors.
